Hill**

# ACCESS Engineering

**AccessEngineering®** prepares students to solve real-world problems across the full range of engineering disciplines, provides access to upper-level textbooks and professional reference content at no additional cost, enables faculty to integrate practical resources into their courses, and helps to ensure comprehensive preparation for exams and certifications.

## Subject Areas

- ▶ Aerospace
- ▶ Biomedical
- ▶ Chemical
- ▶ Civil
- ▶ Computer
- ▶ Electrical
- ▶ Energy
- ▶ Engineering Management
- ▶ Environmental
- ▶ Industrial
- ▶ Materials
- ▶ Mechanical

An institutional subscription to **AccessEngineering®**:

- ▶ Provides students with digital editions of leading upper-level engineering textbooks such as Golnaraghi's *Automatic Control Systems*, Davis' *Water and Wastewater Engineering*, Vanek's *Energy Systems Engineering* and the well-known *Schaum's Outlines*.
- ▶ Incorporates current editions of authoritative engineering handbooks including *Marks' Standard Handbook for Mechanical Engineers*, *Perry's Chemical Engineers' Handbook*, *Roark's Formulas for Stress and Strain*, and the *Standard Handbook for Electrical Engineers*.
- ▶ Includes thousands of interactive graphs, downloadable tables, spreadsheet calculators with embedded equations, instructional videos and eBooks to integrate into any engineering curriculum.
- ▶ Features access to McGraw-Hill's award-winning data visualization tool—**DataVis™**—specifically designed for teaching material properties.

## Inside you'll find:

### Spreadsheet Calculators

Spreadsheet calculators save users time and reduce errors by streamlining calculations of hundreds of common engineering equations.

Activated Sludge Wastewater Treatment Calculations - U.S. units  
Aeration Tank Sizing Calculations

Parameter Values Transferred from Worksheet 2:

- Design Wastewater Flow Rate,  $Q_d$  = 1.5 MGD
- Primary Effluent BOD<sub>5</sub>,  $S_0$  = 180 mg/L
- Aeration Tank MLSS,  $X$  = 2100 mg/L
- % solids MLSS, % WS = 25%

Enter values in yellow cells only.

1. Sizing Based on Volumetric Loading

Design Vol. Loading,  $V_L$  = 10.5 lb BOD<sub>5</sub>/day/1000 ft<sup>3</sup>

Design Aeration Tank Volume

Aeration Tank Volume,  $V$  = 51,189 ft<sup>3</sup>    Air Tank Hyd. Retention Time = 1.64 hr

Air Tank Volume,  $V_{air}$  = 0.428 MG    Air Tank F/M Ratio = 0.382 lb BOD<sub>5</sub>/day/lb MLSS

2. Sizing Based on Hyd. Retention Time

Design Aeration Tank HRT = 1.64 hr

Design Aeration Tank Volume

Aeration Tank Volume,  $V$  = 51,189 ft<sup>3</sup>    Air Tank Hyd. Retention Time = 1.64 hr

Air Tank Volume,  $V_{air}$  = 0.428 MG    Air Tank F/M Ratio = 0.382 lb BOD<sub>5</sub>/day/lb MLSS

References and Equations

A flow diagram of the activated sludge process is shown below along with the equations used in this spreadsheet. For more details and background information on the activated sludge process and its design and operation calculations, use the following references:

Peter and Wastwater Engineers Design Principles and Practice, Sec 21.7, Suspended Growth Design: The Standard Handbook of Environmental Engineers, 2nd Ed, Sec 5.1, Activated Sludge

Handbook of Environmental Engineers Calculations, 2nd Ed, Sec 1.7.1, Activated Sludge Process

Design of Water Resource Recovery Facilities, 4th Ed, Sec. 12.1.3 Activated Sludge Environment

Activated Sludge Flow Diagram & Procession

Equations Used for These Calculations:

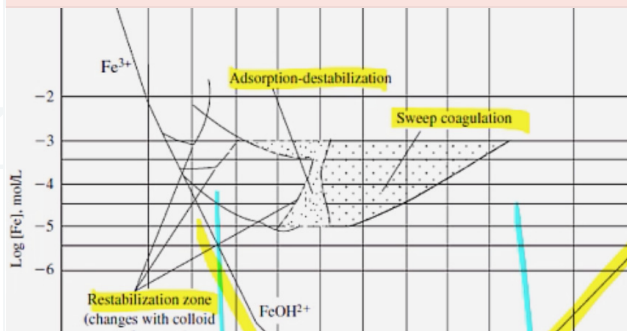

Aeration tank volume in millions of gallons:  $V_{MG} = V/2.47 \times 10^6$

Volumetric Loading:  $V_L = [(1.34 \times 10^{-4} \times V_L) / 1000] (lb/1000 ft^3)$

Hydraulic Loading:  $HRT = 24 \times V_{MG} / Q_d$

### Videos

A robust repository of instructional videos created exclusively for AccessEngineering by renowned engineering faculty & professional engineers offer step-by-step solutions to engineering problems.

### Graphs and Tables

Thousands of interactive graphs and downloadable tables allow for greater accuracy and analysis of data.

### Browse by Course

Easily find content for many common engineering courses using the dynamic Browse by Course feature. Browse at the top level for broader results, or drill down to find content on specific course topics.

### DataVis™ Material Properties

DataVis™, an award-winning interactive data visualization tool, is specifically designed for teaching material properties. DataVis makes it easy to compare properties across different materials and to evaluate multiple properties simultaneously. Student users say DataVis significantly improves their understanding of material properties.

### Solution Walkthroughs

Make challenging homework problems easier and help students learn more in less time by providing comprehensive step-by-step explanations—not just answers—of engineering problems from leading textbooks.

#### Solution Walkthroughs on AccessEngineering

### Case Studies

AccessEngineering Case Studies are designed to be used in case method teaching, presenting real-world examples of BME and other engineering applications. Cases include questions and problems tied to specific ABET learning objectives and come with teaching notes and solutions for instructors.

#### Rotator Cuff Repair: Bridging the Gap Through Engineering Innovation

Katherine E. Reuther, Sarah I. Rooney

Case Study Resources (6)

Focus View

#### INTRODUCTION

Rotator cuff tears are common conditions, affecting nearly half of the population over the age of 50. These tears can lead to significant pain and dysfunction, including deficits in strength and limitations in range of motion, while some patients remain asymptomatic. Treatment often includes surgical repair of the tear, with nearly 500,000 rotator cuff repairs being performed annually in the United States. Unfortunately, healing remains inconsistent and re-tears often occur within three months after surgical repair (up to ~90% failure rate for larger tears), resulting in return of severe pain and disability. Engineers, scientists, and clinicians have been working for several years on methods to improve rotator cuff repairs, including introduction of new surgical techniques and new devices, like suture anchors and augmentation patches.

### Intelligent Search Functionality

AccessEngineering's proprietary search algorithm makes it incredibly easy for users to quickly find the information they need.

For more information on AccessEngineering, email us at [customersuccess@mheducation.com](mailto:customersuccess@mheducation.com)

AccessEngineering offers retrievable institutional usage statistics, title by title usage statistics, MARC 21 records, advanced search capabilities, including Boolean search, and is COUNTER compliant. AccessEngineering also offers flexible access for both in-network and remote users via IP authentication, Shibboleth authentication, referral URL, and/or username and password.
